- Chest pain, sometimes with exercise and sometimes without exercise
- Some episodes are in favor of precordial catch syndrome but some are not

Diagnosis:

- SDS
- PFO with left to right shunt
- Intact ventricular septum
- Mild TR
- Tricuspid aortic valve
- No AR
- No MR
- False tendon in the LV
- Normal function of RV and LV
- Normal size and roofed coronary sinus
- Normal Doppler of abdominal aorta
- Normal size of IVC with normal collapse with inspiration
- Normal proximal coronary arteries
- No coronary artery passes between the pulmonary artery and aorta
- Left aortic arch

Plan:

- Meticulous care should be taken to avoid paradoxical systemic air embolization across the PFO during IV fluid administration
- Exercise test

Cardiologist: **Dr. Malakan Rad**
